

“We provide Digital skills  
for the new Millennium”

## Course Summary

Lighting is one of the chief elements of shooting video. To a novice an empty room and a mass of lights is a scary situation. This illuminating one-day workshop covers the basic vocabulary and practice of lighting for video through demonstrations, screenings and exercises. We will focus on the underlying principles of lighting while finding solutions for the practical problems, including those inherent in the low-budget production. Through exercises we will set up different lighting schemes, including lighting for interviews, product shots, and chroma keying. Instrument choices, power, color, temperature, continuity, high and low key lighting, and safety procedures will all be addressed. Additionally, you are encouraged to bring your own equipment so you can develop strategies for real world situations. The goal of this class will be to help you to take control of the craft of lighting so that it can enhance your video productions.

## Prerequisites

Because of the amount of material we cover in class, we do recommend students to be comfortable using a video camera.

## What You Will Learn

- Three Point Lighting
- Studio and Location Lighting
- Lighting for Interviews
- Common Terminology
- Product Lighting
- Chroma Key Lighting
- High key and Low Key Lighting
- Color Temperature
- Umbrellas and Gels
- Reflectors and Diffusers
- Outdoor Lighting Tips
- Power and Safety
- Choosing and Building a Lighting Kit

## Who Needs to Attend

Any novice videographer or digital filmmaker wanting to add additional tools to their creative palate and learn the important basics every videographer should know by heart.
