

# Adobe Photoshop 7.0 Introduction

“We provide Digital skills for  
the new Millennium”

## Course Summary

Photoshop is the worlds most popular image editor. From photography to fine art, from video editing to web design, Photoshop is an indispensable tool for todays designer. We will start with core concepts such as monitor calibration and move on to Photoshop signature features (layers, masks, channels) which are so essential in mastering the program. We will examine image acquisition, resolution issues, color modes, and file formats. We will explore photoshops built in layer styles, and its vast array of filters. Some of todays most popular effects will be deconstructed in class. We will then examine web design with Image Ready 3.0 covering such issues as rollovers, image maps, slices, animation, and optimization.
